EDUCATION

Tsinghua University Sep 2025 – Jun 2029 (exp.)
| B.Eng. candidate in Computer Science and Technology

- GPA: 3.9/4.0; 57 credits completed through Summer 2026.
- Relevant coursework: University Physics I (A+), Linear Algebra, Advanced Linear Algebra, Calculus I–II, Discrete Mathematics I–II, Programming Fundamentals, Object-Oriented Programming.

RESEARCH EXPERIENCE

MEG-to-Audio Representation Decoding April 2025 – Present
| Brain-to-Audio research project

- Developed and evaluated a first-stage MEG-to-audio representation decoding pipeline on Forrest Gump viewing data (11 participants; 272 shared MEG channels), including signal preprocessing and synchronized audio targets.
- Implemented 22 subject-specific ridge-regression baselines and evaluated a shared CNN–Transformer model with CLAP, BEATs, and acoustic targets; held-out tests exposed a trade-off between clip retrieval and acoustic reconstruction. Ongoing research.

AAArena: Benchmarking LLM Agents in Adversarial Games July 2026 – Oct 2026
| Research contributor; paper co-author

- Reconstructed the DOTO and Miracle editions of the Tsinghua University AI Agent Competition into reusable benchmark tasks for evaluating code-writing agents.
- Contributed game-specific competition resources and evaluation setup within the larger AAArena benchmark (12 games in total); project scope limited to the two editions above.

PUBLICATION

Kaisen Yang, Qingle Liu, et al. (including Xiang Gao). "Can AI Agents Learn Their Way to the Top? Evaluating Heuristic Learning in a Long-Running Game Agent Competition." arXiv:2610.12341 (preprint, 2026). Paper

ENGINEERING PROJECT

Motor Imagery–Driven Closed-Loop Functional Electrical Stimulation 2026
| Medical-engineering competition

- Developed a motor-intent recognition model and integrated the EEG headset with the functional electrical stimulation (FES) subsystem into an end-to-end closed-loop prototype for a spinal cord injury rehabilitation research project.

HONORS & AWARDS

Comprehensive Excellence Scholarship 2025–2026
| Tsinghua University, CS Department

Second Prize, Second Round Jun 2026
| 12th National Undergraduate Medical Innovation Competition

Medical–Engineering Interdisciplinary Track, "Belt and Road" International Competition.

TECHNICAL SKILLS & INTERESTS

Tools & methods: C/C++, Python, Linux, Git, PyTorch, CNN/Transformer modeling, MEG/EEG signal processing, regression baselines, empirical evaluation.

Research interests: Quantum computing architecture, computer architecture, hardware–software co-design.
